Accessing Common Settings

Hard Buttons

The four hard buttons located below the RPK4-CH4101 display, give you the ability to assign a single preset to each button to control a specific Climate Control function, force activate a specific camera to display on the radio, or to control select screen settings. Once the buttons have been assigned a function, a descriptive tag above each button showing what function that button performs will be present (this function can be toggled on / off).

If popups are turned on in the menu: The proximity sensor, within the dash bezel, will display the descriptive tabs when your hand is near the buttons. When your hand is removed, the tabs will disappear.

Options that are able to be preset to the hard buttons include:

Climate Control Functions*
- Max A/C
- Sync
- Heated Wheel
- Fan Mode

Camera Functions**
- Camera 1
- Camera 2
- Camera 3
- Camera 4
- Camera 5

Screen Shortcut Functions*
- Climate
- Camera
- Gauges

* Climate Control Functions will vary for Single Zone and Dual Zone applications.
** The number of available cameras will vary based on how many cameras are installed and activated.
Additional Hard Button options coming soon!

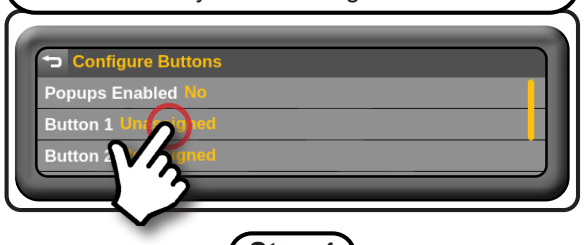
Assigning function to the Hard Buttons

Step 1

Press the Buttons icon in the settings menu.

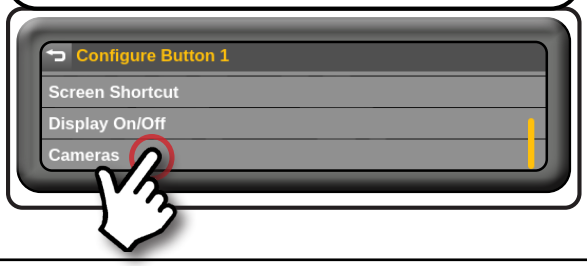
Step 2

Touch the tab that corresponds to the hard button that you wish assign a function to.



Step 3

Click on the device (Unassigned, Climate Controls, Cameras) operation you wish to program. In the example, we want to use the first hard button to force activate the cargo camera, so we select the Camera option.



Step 4

In the example, because Camera 5 is the cargo camera, we select the Camera 5 option. Repeat steps 3 through 4 for each hard button you wish to program.
