

# Sources of Water in Santa Clara County

(Tune: Twinkle, Twinkle Little Star)

By Kathy Machado

Where can our water be found?  
Thirty percent is from the **ground**.  
From reservoirs, streams and rain,  
And percolation ponds, it's plain.  
All of this seeps in the **ground**.  
We pump it up, that's where it's found.

Where does our water come from?  
We **import** it; yes, quite a sum!  
Fifty-five percent is on its way  
From the mountains every day.  
Government, federal and state  
San Francisco we compensate.

Turn on the tap; what do you see?  
Water flowing, it's not free!  
**Imported** and from the **ground**,  
More water had to be found.  
**Recycled** water add to these.  
But, save water, won't you please?
