

## CONCERNS

- Congestion along King Road
  - Who's responsible for widening?
- Homeless encampments
  - Particularly along Flea Market area
- Was climate change considered in the concepts and alternatives?
- Flood benches preferable for fish instead of bypass channel (provides refuge during high flows, especially for small fish)
- Design with fish habitat in mind—make sure channel will accommodate gravel, woody debris, etc.
- Don't make floodwalls higher than shown (avoid floodwalls at all costs—look at all possible alternatives)
- Preserve max amount of existing riparian corridor/vegetation
- Why D/S to up
- Redesign area at Noble bypass with fish ladder
  - Create step pools for fish
