HOUSE BILL 25-1183

BY REPRESENTATIVE(S) Gilchrist and Bacon, Carter, Espenosa, Mabrey, Zokaie, Velasco, Ricks;
also SENATOR(S) Ball and Daugherty, Amabile, Cutter, Jodeh, Weissman.

CONCERNING THE CREATION OF A WORKING GROUP TO STUDY THE USE OF
COLORIMETRIC FIELD DRUG TESTS, AND, IN CONNECTION THEREWITH,
MAKING AN APPROPRIATION.

Be it enacted by the General Assembly of the State of Colorado:

SECTION 1. Legislative declaration. (1) The general assembly finds that:

(a) Each year, over 750,000 people in the United States are arrested for drug possession based upon colorimetric field drug test results;

(b) A colorimetric field drug test is a small plastic pouch that contains a chemical reagent that reacts with aspects of certain compounds that are often found in drugs. The test is administered by placing a suspected controlled substance in the chemicals in the pouch to see if the chemical reagent changes to a specific color.

Capital letters or bold & italic numbers indicate new material added to existing law; dashes through words or numbers indicate deletions from existing law and such material is not part of the act.

(c) Colorimetric field drug test results are presumptive tests that should be confirmed by further laboratory testing as these presumptive tests identify only aspects of a chemical compound, many of which are shared by both controlled substances and common household items including sugar, sugar substitutes, items containing sugar or sugar substitutes, soap, coffee, nutritional supplements, and over-the-counter medications.

(d) A recent study published by the Quattrone Center for the Fair Administration of Justice at the University of Pennsylvania Carey Law School states:

(I) Presumptive field drug tests, like the colorimetric field drug test, "[are] one of the largest, if not the largest, known contributing factor to wrongful arrests and convictions in the United States";

(II) Approximately "[thirty thousand] arrests each year involve people who do not possess illegal substances but who are nonetheless falsely implicated by color-based presumptive tests"; and

(III) "On a per capita basis, Black Americans experience these erroneous drug arrests at a rate [three times] higher than White Americans";

(e) Vendors of colorimetric field drug tests caution that the tests are recommended only for presumptive purposes absent confirmation from a crime lab that uses more advanced testing methods;

(f) People regularly plead guilty to drug possession offenses absent confirmation from a crime lab that uses more advanced testing methods. A plea may be made to avoid prolonged detention while awaiting advanced testing results from a crime lab. Consequently, the plea and its collateral consequences burden the person indefinitely, based on the error-prone colorimetric field drug test.

(g) Colorimetric field drug tests are also used in a variety of other settings in Colorado, including correctional systems, possibly resulting in unfair disciplinary sanctions. The extent of use in these settings is unknown.

(2) Therefore, the general assembly declares that convening a working group to make findings and recommendations concerning the use of colorimetric field drug tests is necessary to improve judicial system

outcomes, including preventing wrongful convictions, coercive plea agreements, and negative correctional outcomes.

SECTION 2. In Colorado Revised Statutes, **add** part 24 to article 2 of title 2 as follows:
