

SU-300-75 Sump

# SU-300-75

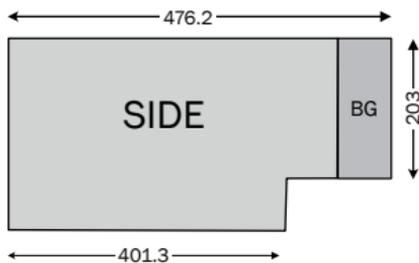

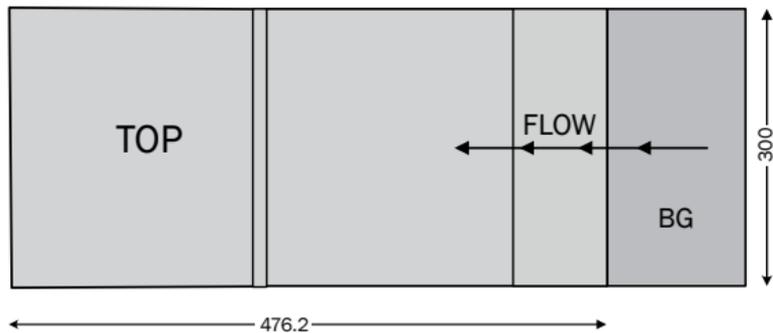

Unlike existing sumps made by all other manufacturers, box gutters discharging to a Dam Buster Sump are designed for genuine 'free flow' in accordance with Figure I1 of AS/NZS 3500.3 in both the normal and overflow conditions. This also means the box gutter can be designed independently of the sump i.e similar to the rainhead.

The SU-300-75, has an outlet size of 300mm that connects directly to a 300mm box gutter. It has a depth of just 75mm and an overall height of 280mm.

If at all unsure of just which sized unit you need, or would like a lot more technical data etc, there are detailed information charts and calculators, and also installation instructions available for download on the Dambuster website below.
