

# JET BLAST

## 16" Tunnel Fan

The JET BLAST Fan throws a long, narrow air column for use with docks, isles, workstations, smoke evacuations and any application requiring massive airflow with distance. It comes standard with a floor pedestal with lockable wheels or use the optional Swing Arm Wall Mount to direct air into hot semi-trailers. What makes the Jet Blast Fan unique is that it is half as loud and twice as powerful as the competitors, for the same money. **Finally!**

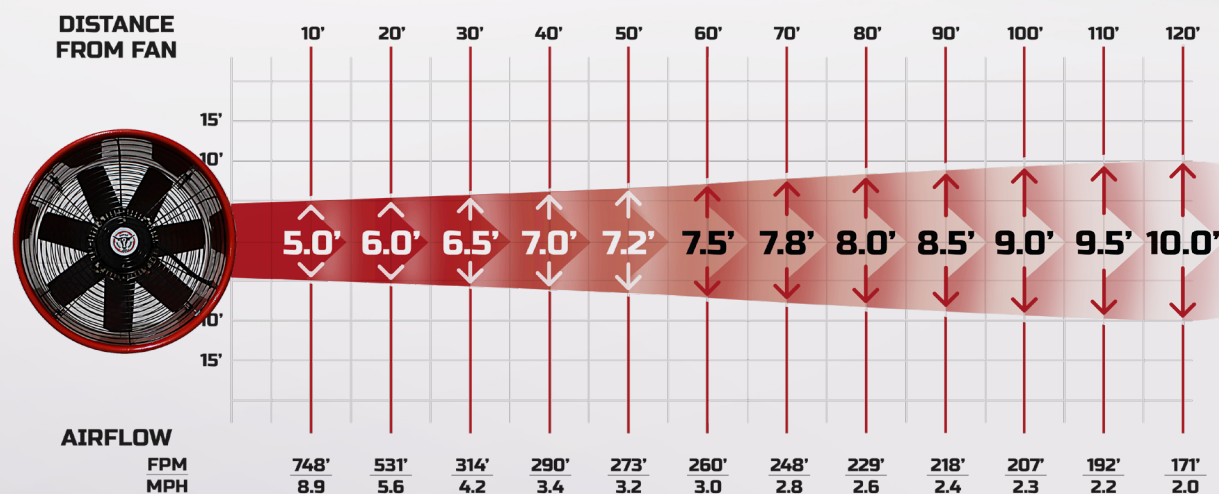

# JET BLAST
