

## Mounting Instructions

For accurate measurements, choose an open area away from roof lines or water runoff.

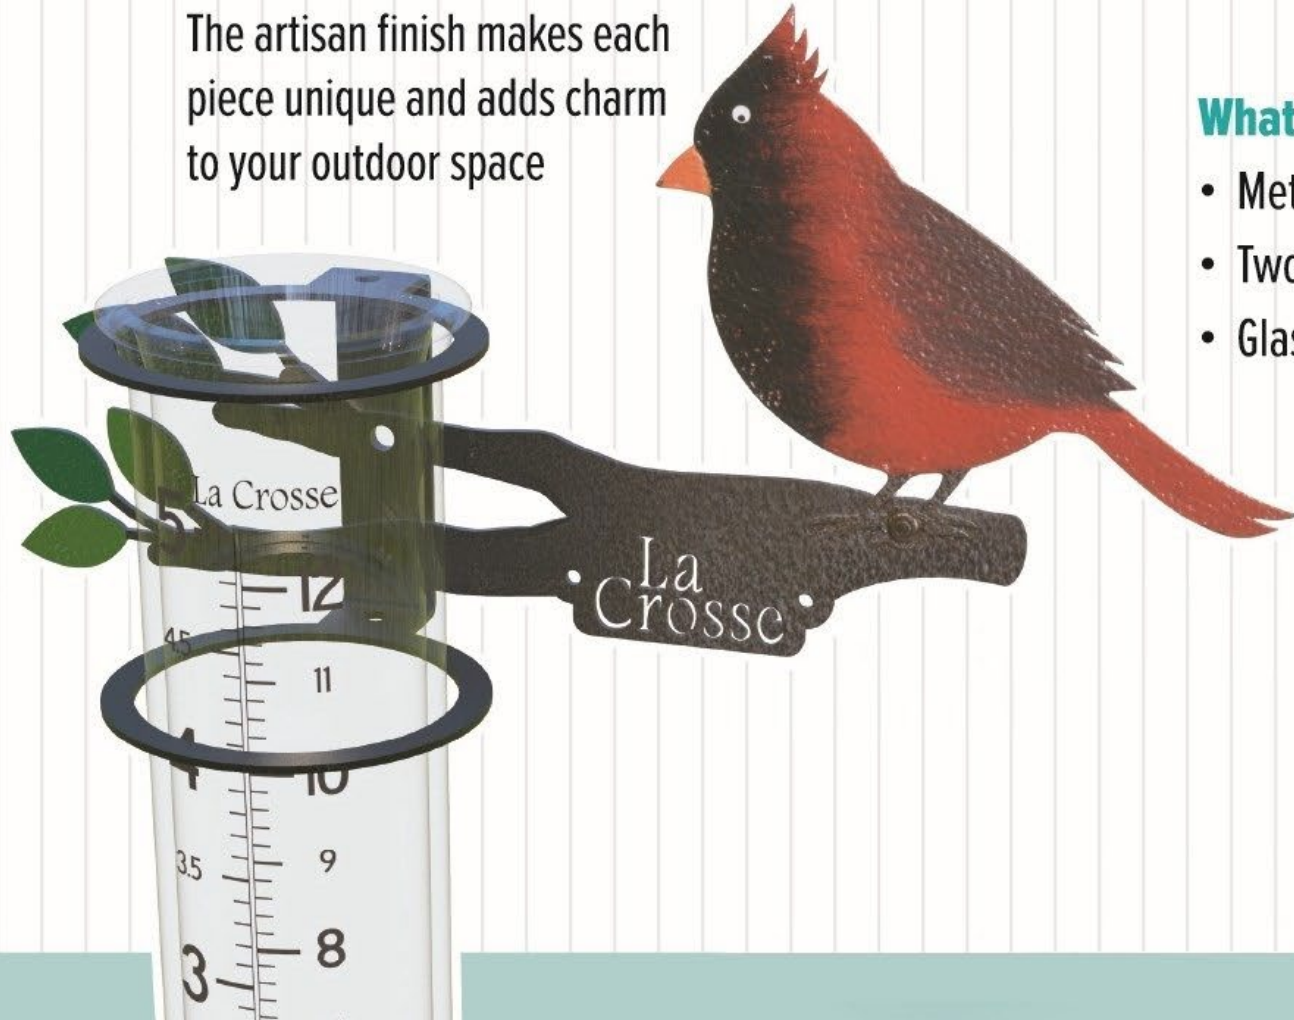

1. Using the included screws, mount the rain gauge holder to a wood post or fence.
2. Once secured, slide the rain tube into the holder and rotate as needed for optimal viewing.

## Rainfall Measurement

You may notice the markings don't match the measurements of a ruler. Rainfall is not a linear calculation, and is based on the opening of the rain gauge (referred to as the catchment area). The scale was designed to accurately measure rainfall based on the dimensions of the collector.

## Vibrant and Hand-Painted

The artisan finish makes each piece unique and adds charm to your outdoor space
