

KVADRO 125

PREMIUM FRAMELESS CEILING VENT

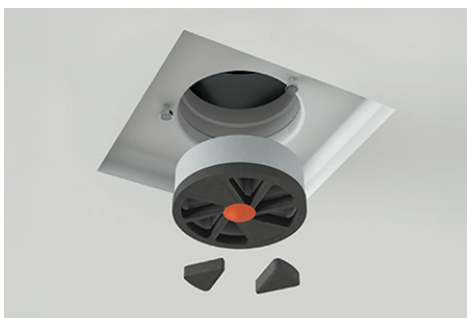

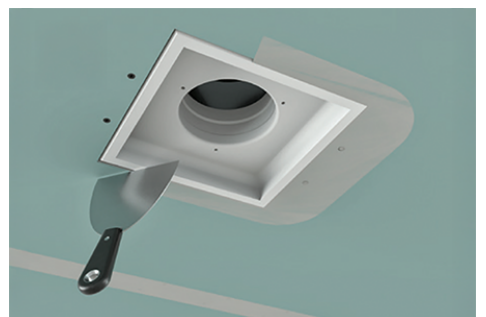

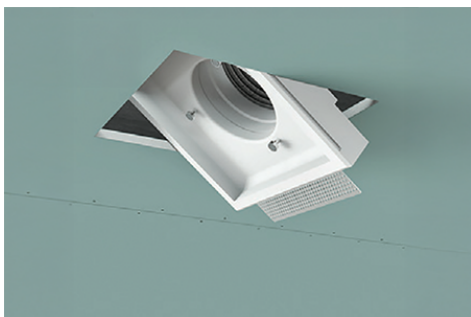

Dimensions

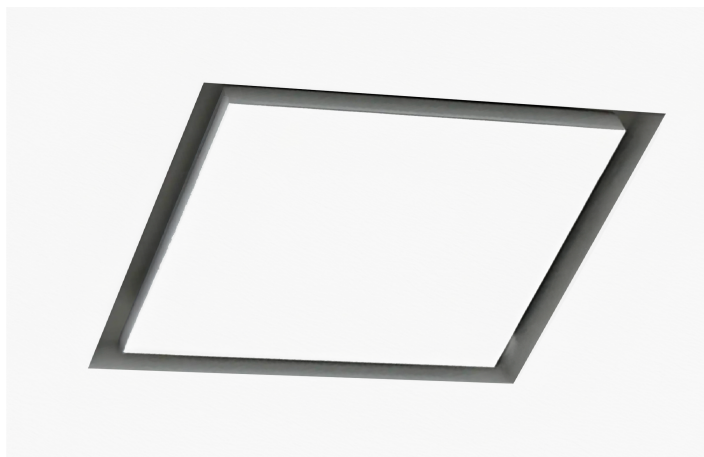

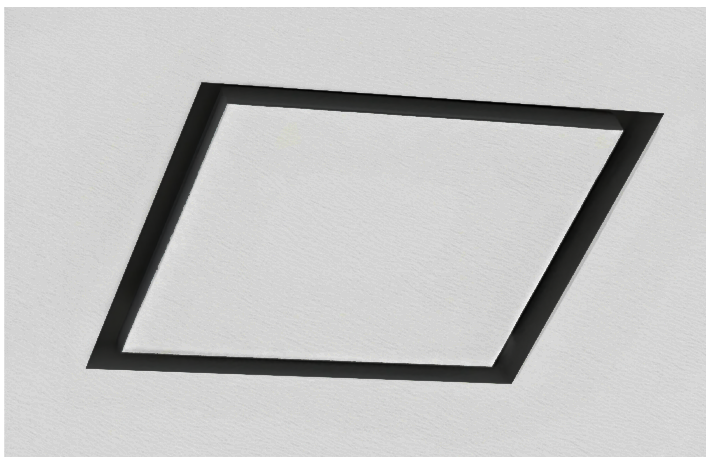

Installation

Once fixed into position, the vent installs discreetly into the ceiling. Simply plaster around the vent, and paint it to match its surroundings for an unobtrusive, modern finish.

Colour Match

 You can perfectly match the colour of your ceiling by painting the vent.

The vent comes with an inbuilt airflow regulator.

If required, easily add in the additional segments to restrict & control airflow.

The vent connects to standard 125mm diameter ducting for use with an inline fan system. This makes it an idea choice for those looking for premium finishes.

This makes the Ergovent Rondo perfect for adding a high-end finish to bathroom extraction systems, or to help hide centralised air-conditioning systems.
