

Premium Frameless Vent Kits

- Complete ventilation kit extracts steam & moisture from bathrooms & wet areas
- Premium Frameless vent gives cleaner architectural look
- Quiet & powerful Inline fan Included
- Flexible mounting and colour options designed to seamlessly fit into your home
- 150mm or 125mm Options Available

150mm inline
Mixflow Kit

A photograph showing a white, frameless, circular ventilation unit mounted on a white wall. A flexible, silver-colored duct is connected to the unit, curving upwards and then downwards. The unit has a simple, clean design with a single circular grille.

150mm Inline
Silent Kit

A photograph showing a black, frameless, rectangular ventilation unit mounted on a white wall. A flexible, silver-colored duct is connected to the unit, curving downwards. The unit has a more complex design with a black grille and a small black control panel on top.

125mm Inline
Mixflow Fan
& Hood Kit

A photograph showing a white, frameless, rectangular ventilation unit mounted on a white wall. A flexible, silver-colored duct is connected to the unit, curving downwards. The unit has a simple, clean design with a single rectangular grille.

It's more than just a bathroom fan It's a Design Upgrade

What is Frameless Ventilation?

Premium frameless ventilation pairs a discreet ceiling vent with an inline fan, delivering quieter operation and higher performance. **The result is a cleaner, more premium alternative to standard exhaust setups.**

How does the system work?

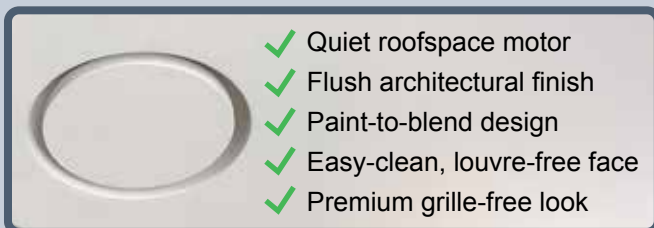

A frameless ventilation system draws air through a discreet ceiling mounted intake vent, which is then extracted by an inline fan located within the roof space. The air is sucked through ducting and expelled via an external eave vent installed under the roofline.

This setup moved the fan away from the intake, reducing noise and allowing for a more elegant and aesthetically sophisticated vent to take its place.

How does a Frameless Vent compare to a standard bathroom fan?

Premium Frameless Vent

Standard Bathroom Fan

What are the Advantages of a Premium Frameless System?

- Enhanced Airflow** - A premium Fanco Inline fan sits within the roofspace, which reduces turbulence and delivers more consistent airflow.
- Clean, Architectural Finish** - With no bulky plastic grilles disrupting the ceiling, frameless vents will sit flush with a minimal, modern look.
- Quiet Operation** - With the motor positioned in the roof space away from the room, noise is reduced compared to ceiling-mounted exhaust fans.
- Flexible Installation** - Inline fans allow remote installation (attic, roof cavity, mechanical room, etc), giving more freedom for more desired and unobtrusive vent placement.

How do I choose the best Frameless Ventilation Kit for me?

Step 1: Choose your room type:

POWDER ROOM

SMALL LAUNDRY

STANDARD BATHROOM

ROOM LAUNDRY

LARGE BATHROOM

Less Steam
Suited for 125mm Kit

➔

More Steam
Suited for 150mm Kit

Step 2: Choose your Motor requirements:

Great Value Airflow Performance
Great value ventilation for everyday applications

Fanco TT Mixflow Inline Fan
Max Airflow: 280m³/hr
Duct Size: 125mm
Noise: 37 dB(A)
Power: 60w
Max Pressure: 138 Pa
2 Speeds via electrician wiring
125mm Kit Only

Strong, Efficient Airflow Performance
Good for almost every residential application

Fanco TT Mixflow Inline Fan
Max Airflow: 530 m³/hr
Duct Size: 150mm
Noise: 44 dB(A)
Power: 60w
Max Pressure: 275 Pa
2 Speeds via switch on motor
Supplied with lead and plug
150mm Kit Only

High Airflow Capacity, Lowest Operating Noise
Ideal for quiet, high output performance

Fanco TT Silent Inline Fan
Max Airflow: 555 m³/hr
Duct Size: 150mm
Noise: 33 dB(A)
Power: 52w
Max Pressure: 250 Pa
2 Speeds via switch on motor
Supplied with lead and plug
150mm Kit Only
