

TRAUMA STRAPS

Accessory

The Trauma Strap is an indispensable item for anyone working at height, and helps to mitigate the effects of suspension trauma (which can occur in as little as 15 minutes) in the event of a fall. By allowing the fallen worker to assume a standing position and relieve pressure on the lower extremities, the Trauma Strap allows better blood flow and reduces fatigue.

Compatible with all Guardian full-body harnesses, the Trauma Strap is easy to adjust, and its low profile keeps it out of the way during work.
