CAN TOP SECURING CLIP SPECIFICATIONS

Paterson Products Can Top Securing Clips are inspected on average 5 parts per 10,000 clips produced. The clips are checked visually for the type identification, burrs and any formation defects. Clips are also tested against go / no-go gauges. These gauges verify that the clip has the correct shape and the gap is an acceptable dimension. Paterson Products can supply a Certificate of Conformance confirming that a batch of clips did meet our quality inspection requirements.

The critical dimension of the clips is the gap. If the gap is too large, the clips may slide around the can. If the gap is too small, the clips become difficult to apply and remove.

The gap is checked by the go / no-go gauges. The following table indicates the maximum and minimum gap dimensions accepted by the gauges.

Securing Clip Type	Gap Minimum (inches)	Gap Maximum (inches)
A	0.1625	0.1925
B	0.1540	0.1840
C	0.1730	0.2030
