

Responder Connect

Arrive on Scene with **Full Situational Awareness**

What is Responder Connect?

Responder Connect enables first responders including Police, Fire, and Emergency Medical Services (EMS) to gain situational awareness of an emergency incident even before they arrive on scene, via live video, dynamic location, and more. Responder Connect works without requiring an app download and can be used without a password unless required by your organization.

Live Video (Patented)

Get eyes on the scene of the emergency within seconds of the caller clicking a link on their phone. Take guesswork out of your operation.

No App Download

Precious seconds can mean the difference between a rescue and tragedy. No more waiting for apps to download when time is of the essence.

Accurate, Dynamic, Caller Location

Know the exact location of your caller using Carbyne location included in Responder Connect, even when ANI/ALI fails, and AML/ELS fails.

No Password Required

Avoid error-prone password entry and "access denied" messages in the middle of your emergency response, so you can focus on the mission at hand.

“The Carbyne team helps ensure that our nation’s first responders and the operators of critical infrastructure have the tools and information they need to effectively respond to any crisis.”

Kirstjen Nielsen
Former US Homeland Security Secretary
