"WATER IS LIFE. IT NOURISHES US,
CLEANS US AND SUSTAINS US."

WATERSMART TIPS FOR AT HOME WATER CONSERVATION

WASHING MACHINE

Wait until you have a full load of laundry before running the machine to save both water and energy.

- By running full loads in the washing machine, the average family can save up to 700 gallons of water per month, reducing water bills.
- Make sure to adjust the water level for each load.
- A front-load washing machine uses 1/3 less water than a top load machine.
- Remember to set up an appliance maintenance check-up every 3-4 years to ensure the performance efficiency of your washing machine.
- When in the market for a new washing machine, be sure to research high-efficiency models. These machines use an average of 30% less water and 50% less energy- and get your clothes cleaner!

TOILETS

More water is used to flush the toilet than any other purpose in the home!

- Never use your toilet as a wastebasket!
- Check toilets for leaks at least twice a year when you reset your clocks. To check for leaks place a few drops of food coloring in the tank. Wait 10 minutes without flushing and check the bowl. If color appears in the bowl, you have a leak.
- Installing a WaterSense labeled, 1.28 gallons-per-flush High Efficiency toilet will lower the cost of water and sewer bills significantly.
- Remember, not all toilet leaks are noisy, some are silent. A leaking toilet can waste hundreds of gallons of water a day.
- Most toilet leaks are the result of a damaged flapper and can be easily replaced with a new, inexpensive flapper.

KITCHEN FAUCET AND DISHWASHER

Washing the dishes accounts for most of the water usage in the kitchen.

- Operate automatic dishwashers only when fully loaded to save on hot water, detergent and energy costs.
- By using the short cycle on your dishwasher instead of the full cycle, you can save 5 gallons of water per load.
- Adjust your freezer to reflect the current climate conditions in order to control ice produced by the ice maker.
- Remember when washing your dishes to limit the hot water usage.
- Check to see if your dishwasher can clean dishes without pre-rinsing them. Most current model dishwashers don't require pre-rinsing.
- If you need to hand-wash dishes, do not leave the tap running while you scrub.

SHOWERS AND TUBS

Dripping showerheads can waste hundreds of gallons of water a week, depending on the size of the drip.

- Take short showers instead of baths to use less water. Reducing your shower time by just one minute can save two to six gallons of water.
- Check your showerhead for drips or leaks and replace washers. Worn out washers are the main cause of leaks.
- The typical showerhead allows a water flow of five gallons per minute. Installing a WaterSense labeled showerhead will reduce this flow by more than 50%.
- When taking a bath, fill the bath tub half way and save 15 gallons of water.

BATHROOM FAUCETS

- Bathroom faucets use two to seven gallons of water per minute.
- Always turn off the water while brushing your teeth and washing hands.
- Install a high efficiency faucet aerator with a restrictor to reduce flow by 25%.
- Remember to clean the aerator routinely to remove any obstructing particles collected in the screen.
- Fix leaks immediately: a small drip can result in up to 15 gallons of water a day or 105 gallons a week in wasted water, which adds up to more than 5,000 gallons of wasted water a year!

OUTDOOR TIPS

- Irrigate in the early morning or after dew fall. The ground is the most receptive to water, and loss due to evaporation and wind is minimized.
- Adjust your sprinkler system. Make sure the heads are not directed at the pavement, but are only watering plant material.
- Group plants with similar water needs together.
- Water deeply once a week. Frequent watering encourages shallow root growth.

DROUGHT

Water efficiency and conservation are always important, but it is even more vital in times of drought. Visit www.cobbcounty.org/outdoorwateringrestrictions to stay current on drought status and watering restrictions.
