A Message From Our District Health Director, Dr. Memark

Good afternoon Cobb and Douglas Communities.

One week before Christmas, and we are met with the hope of ending this pandemic with the release of the Pfizer COVID-19 vaccination and the pending review of the Moderna vaccine this week. You can find more out about this in our newsletter below. However, I would be remiss to not mention the dire situation that our community is facing.

Case rates are 678/100,000 in Cobb County and 727/100,000 in
Douglas county when you add in the rapid antigen test results for the last two weeks. That is over 6-7 times what would be considered high transmission. We are in **substantial, community transmission** of COVID-19. Hospitals are extremely full with a record number of COVID-19 hospitalizations to match the record number of cases that we are seeing. Much of what we are seeing is thought to be due to the holiday traveling and gathering from the Thanksgiving vacation.

Many of you may have heard that Cobb schools announced an early switch to virtual learning for the rest of the week before the holiday break. I know that this is an inconvenience to many of our families, but the rising number of cases being brought into the schools increases the risk of in-school transmission. We work collaboratively with the school districts to help them have the safest environment for both students and faculty. These extra days will also allow Cobb & Douglas Public Health and Cobb County School District staff to complete case investigation and contact tracing on existing cases in an attempt to keep families of students/staff healthy during the holiday break.

Vaccination for the mass population is still months away. Many of our residents can be hospitalized or lose their lives to COVID-19 in that time frame. We need you to help us slow this down and reverse the trajectory that we are on.

Please do the following:

**Wear your masks** in public  
**Do not gather** with those outside of your immediate family or bubble  
**Watch your distance** from others - **at least 6 feet**  
**Wash your hands**

We know these actions work and it is critically important that we all do our part to fight this virus.

Sincerely,  
Janet Pak Memark M.D., M.P.H, F.A.C.P.  
District Health Director  
District 3-1: Cobb & Douglas Public Health
Cobb: More than 4,000 cases have been reported in Cobb County in the last two weeks, with a 2-week case rate of 521 per 100,000 people (as of 12/14/20). This case number has been rising over the last few weeks and seems to be following surges that we are seeing across the nation. Please remember that anything over 100 cases/100K is considered HIGH.
Douglas: Nearly 800 cases have been reported in Douglas County in the last two weeks, with a 2-week case rate of 505 per 100,000 people (as of 12/14/20). This rate is in the “HIGH/Substantial Spread” category and higher than case rates were before the summer spike in late June. This case number has been rising over the last few weeks and seems to be following surges that we are seeing across the nation. Please remember that anything over 100 cases/100K is considered HIGH community transmission. Also note: this graph only includes PCR positives, it does not include the rapid antigen test results, which is at 337 cases in the last two weeks.
