

Prescreening Health Survey – to be conducted prior to registration and repeated 24 hours prior to event

People with COVID-19 have had a wide range of symptoms reported – from mild symptoms to severe illness. <https://www.cdc.gov/coronavirus/2019-ncov/symptoms-testing/symptoms.html>

Symptoms may appear two to 14 days after exposure to the virus. In an effort to keep you, our volunteers, and community as safe as possible, please review the indicator symptoms below identifying if you have experienced any of the following within the past 14 days.

- Cough
- Shortness of breath or difficulty breathing
- Fever
- Chills
- Repeated shaking with chills
- Muscle pain
- Headache
- Sore throat
- New loss of taste or smell

If you have a cough and shortness of breath or difficulty breathing, these symptoms may indicate you may have been exposed to and may test positive for COVID-19. **In exercising an abundance of caution, please do not volunteer for our event.** Continue to monitor your health conditions closely and seek medical attention if necessary. **If you have at least two of the remaining symptoms in the list above, you may also have been exposed to COVID19 and we ask that you do not volunteer for our event at this time.** Continue to monitor your health conditions closely and seek medical attention if necessary.

**Thank you for taking this pre-volunteer health screening and keeping yourself, your family, and community safe. Please let us know if you will not be able to volunteer at this time so we can update our volunteer registration list.**
