Product Description

This Juniper Networks® compatible SFP28 transceiver provides 25GBase-BX throughput up to 80km over single-mode fiber (SMF) using a wavelength of 1309.14nmTx/1295.56nmRx via an LC connector. This bidirectional unit must be used with another transceiver or network appliance of complementing wavelengths. It is guaranteed to be 100% compatible with the equivalent Juniper Networks® transceiver. This easy to install, hot swappable transceiver has been programmed, uniquely serialized and data-traffic and application tested to ensure that it will initialize and perform identically. Digital optical monitoring (DOM) support is also present to allow access to real-time operating parameters. This transceiver is Trade Agreements Act (TAA) compliant. We stand behind the quality of our products and proudly offer a limited lifetime warranty.

AddOn's transceivers are RoHS compliant and lead-free.

TAA refers to the Trade Agreements Act (19 U.S.C. & 2501-2581), which is intended to foster fair and open international trade. TAA requires that the U.S. Government may acquire only "U.S.-made or designated country end products."

Notes:

1. Circuit ground is internally isolated from chassis ground.
2. Tx_FAULT is an open collector/drain output that should be pulled up with a 4.7kΩ to 10kΩ resistor on the host board if intended for use. Pull-up voltage should be between 2.0V to Vcc+0.3V. A "high" output indicates a transmitter fault caused by either the Tx bias current or the Tx output power exceeding the preset alarm thresholds. A "low" output indicates normal operation. In the "low" state, the output is pulled to <0.8V.
3. Laser output disabled on Tx_DIS >2.0V or open, enabled on Tx_DIS <0.8V.
4. Should be pulled up with 4.7kΩ- 10kΩ host board to a voltage between 2.0V and 3.6V. MOD_ABS pulls line low to indicate module is plugged in.
5. Internally pulled down per SFF-8431 Rev 4.1.
6. LOS is open collector output. It should be pulled up with 4.7kΩ – 10kΩ on host board to a voltage between 2.0V and 3.6V. "Logic 0" indicates normal operation. "Logic 1" indicates loss of signal.
