## Product Description

This Juniper Networks ${ }^{\circledR}$ EX-SFP-10GE-CWE39 compatible SFP+ transceiver provides 10GBase-CWDM throughput up to 40 km over single-mode fiber (SMF) using a wavelength of 1390 nm via an LC connector. It is guaranteed to be $100 \%$ compatible with the equivalent Juniper Networks ${ }^{\circledR}$ transceiver. This easy to install, hot swappable transceiver has been programmed, uniquely serialized and data-traffic and application tested to ensure that it will initialize and perform identically. Digital optical monitoring (DOM) support is also present to allow access to real-time operating parameters. This transceiver is Trade Agreements Act (TAA) compliant. We stand behind the quality of our products and proudly offer a limited lifetime warranty.

AddOn's transceivers are RoHS compliant and lead-free.

TAA refers to the Trade Agreements Act (19 U.S.C. \& 2501-2581), which is intended to foster fair and open international trade. TAA requires that the U.S. Government may acquire only "U.S. - made or designated country end products."

## Notes:

1. The module signal ground contacts, VeeR and VeeT, should be isolated from the module case.
2. This contact is an open collector/drain output and should be pulled up to the Host_Vcc with resistor in the range $4.7 \mathrm{k} \Omega$ to $10 \mathrm{k} \Omega$. Pull-ups can be connected to one or several power supplies; however, the host board design shall ensure that no module contact has a voltage exceeding the module VccT/R+0.5V.
3. Tx_Disable is an input contact with a $4.7 \mathrm{k} \Omega$ to $10 \mathrm{k} \Omega$ pull-up resistor to the VccT inside the module.
4. MOD_ABS is connected to the VeeT or VeeR in the SFP+ module. The host may pull the contact up to the Host_Vcc with a resistor in the range from $4.7 \mathrm{k} \Omega$ to $10 \mathrm{k} \Omega$. MOD_ABS is asserted "high" when the SFP+ module is physically absent from a host slot.
5. Internally pulled down per SFF-8431.
