

SFP-1G-BXU35-80-I-NI-AO

Net Insight® Compatible TAA 1000Base-BX SFP Transceiver (SMF, 1310nmTx/1550nmRx, 80km, LC, DOM, -40 to 85C)

Features

- INF-8074 and SFF-8472 Compliance
- Simplex LC Connector
- Industrial Temperature -40 to 85 Celsius
- Single-mode Fiber
- Hot Pluggable
- Excellent ESD Protection
- Metal with Lower EMI
- RoHS Compliant and Lead Free

Applications

- 1000Base Ethernet

Product Description

This Net Insight® compatible SFP transceiver provides 1000Base-BX throughput up to 80km over single-mode fiber (SMF) using a wavelength of 1310nmTx/1550nmRx via an LC connector. This bidirectional unit must be used with another transceiver or network appliance of complementing wavelengths. It can operate at temperatures between -40 and 85C. Our transceiver is built to meet or exceed OEM specifications and is guaranteed to be 100% compatible with Net Insight®. It has been programmed, uniquely serialized, and tested for data-traffic and application to ensure that it will initialize and perform identically. All of our transceivers comply with Multi-Source Agreement (MSA) standards to provide seamless network integration. Additional product features include Digital Optical Monitoring (DOM) support which allows access to real-time operating parameters. We stand behind the quality of our products and proudly offer a limited lifetime warranty.

AddOn's transceivers are RoHS compliant and lead-free.

TAA refers to the Trade Agreements Act (19 U.S.C. & 2501-2581), which is intended to foster fair and open international trade. TAA requires that the U.S. Government may acquire only "U.S.-made or designated country end products."

Notes:

1. Internally AC coupled and terminated to 100Ω differential load.
2. Internally AC coupled, but requires a 100Ω differential termination or internal to Serializer/Deserializer.
3. Pulled up externally with a 4.7kΩ-10kΩ resistor on the host board to VccT,R.
4. Mod_Def1 and Mod_Def2 must be pulled up externally with a 4.7kΩ-10kΩ resistor on the host board to VccT,R.

Notes:

- TX Fault is an open collector/drain output, which should be pulled up with a 4.7KΩ–10KΩ resistor on the host board. Pull up voltage between 2.0V and VccT/R+0.3V. When “high,” output indicates a laser fault of some kind. Low indicates normal operation. In the low state, the output will be pulled to < 0.8V.
- Tx_Disable is an input that is used to shut down the transmitter optical output. It is pulled up within the module with a 4.7kΩ–10kΩ resistor. Its states are:
 - Low (0 – 0.8V): Transmitter On.
 - Between (0.8 and 2.0V): Undefined.
 - High (2.0 – VccT): Transmitter Disabled.
 - Open: Transmitter Disabled.
- MOD-DEF0, 1, 2. These are the module definition pins. They should be pulled up with a 4.7kΩ–10kΩ resistor on the host board. The pull-up voltage shall be VccT or VccR.
 - MOD-DEF 0 is grounded by the module to indicate that the module is present.
 - MOD-DEF 1 is the clock line of 2-wire serial interface for optional serial ID.
 - MOD-DEF 2 is the data line of 2-wire serial interface for optional serial ID.
- LOS (Loss of Signal) is an open collector/drain output, which should be pulled up with a 4.7KΩ–10KΩ

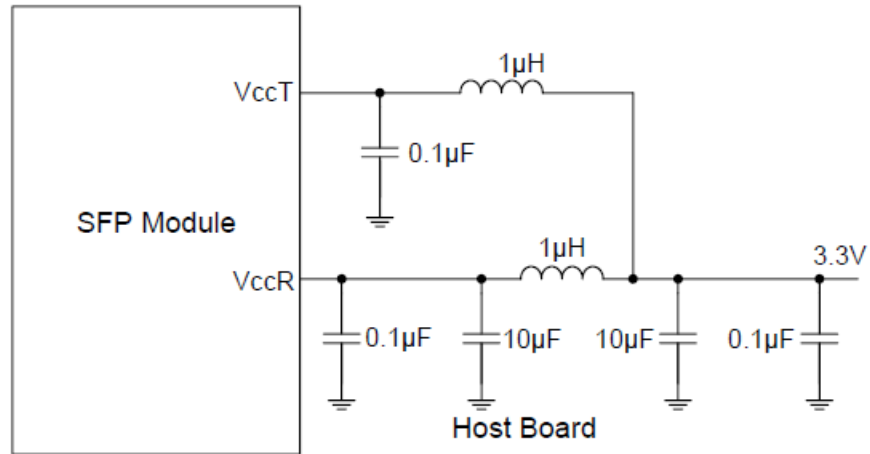

resistor on the host board to supply $<V_{ccT}+0.3V$ or $V_{ccR}+0.3V$. When “high,” this output indicates the received optical power is below the worst-case receiver Sensitivity (as defined by the standard in use). Low indicates normal operation. In the low state, the output will be pulled to $< 0.8V$.

5. RD-/+ : These are the differential receiver outputs. They are AC coupled 100Ω differential Lines which should be terminated with 100Ω (differential) at the user SERDES. The AC coupling is done inside the module and is thus not required on the host board.
6. VccR and VccT are the receiver and transmitter power supplies. They are defined as $3.3V\pm 5\%$ at the SFP connector pin. The in rush current will typically be more than 30mA above steady state supply current after 500ns.
7. TD-/+ : These are the differential transmitter inputs. They are AC-coupled, differential lines with 100Ω differential terminations inside the module. They are AC coupled differential lines with 100Ω differential termination inside the module. The AC coupling is done inside the module and is thus requires on host board.

About AddOn Networks

In 1999, AddOn Networks entered the market with a single product. Our founders fulfilled a severe shortage for compatible, cost-effective optical transceivers that compete at the same performance levels as leading OEM manufacturers. Adhering to the idea of redefining service and product quality not previously had in the fiber optic networking industry, AddOn invested resources in solution design, production, fulfillment, and global support.

Combining one of the most extensive and stringent testing processes in the industry, an exceptional free tech support center, and a consistent roll-out of innovative technologies, AddOn has continually set industry standards of quality and reliability throughout its history.

Reliability is the cornerstone of any optical fiber network and is ingrained in AddOn's DNA. It has played a key role in nurturing the long-term relationships developed over the years with customers. AddOn remains committed to exceeding industry standards with certifications ranging from NEBS Level 3 to ISO 9001:2015 with every new development while maintaining the signature reliability of its products.
