

#### SFP-25GB-DW61-10-OPC

MSA and TAA 25GBase-DWDM SFP28 Transceiver C-Band 100GHz (SMF, 1528.77nm, 10km, LC, DOM)

#### **Features**

- SFF-8432 and SFF-8472 Compliance
- Duplex LC Connector
- Single-mode Fiber
- Commercial Temperature 0 to 70 Celsius
- Hot Pluggable
- Metal with Lower EMI
- Excellent ESD Protection
- RoHS Compliant and Lead Free

## **Applications:**

- 25GBase-LR Ethernet
- Access, Metro and Enterprise

#### **Product Description**

This MSA compliant SFP28 transceiver provides 25GBase-DWDM throughput up to 10km over single-mode fiber (SMF) using a wavelength of 1528.77nm via an LC connector. It can operate at temperatures between 0 and 70C. All of our transceivers are built to comply with Multi-Source Agreement (MSA) standards and are uniquely serialized and tested for data-traffic and application to ensure seamless network integration. Additional product features include Digital Optical Monitoring (DOM) support which allows access to real-time operating parameters. This transceiver is Trade Agreements Act (TAA) compliant. We stand behind the quality of our products and proudly offer a limited lifetime warranty.

OptioConnect's transceivers are RoHS compliant and lead-free.

# **SFP Channel Number and Wavelength**

| Channel | Frequency (THz) | Center Wavelength (nm) | Channel | Frequency (THz) | Center Wavelength (nm) |
|---------|-----------------|------------------------|---------|-----------------|------------------------|
| 15      | 191.5           | 1565.50                | 39      | 193.9           | 1546.12                |
| 16      | 191.6           | 1564.68                | 40      | 194.0           | 1545.32                |
| 17      | 191.7           | 1563.86                | 41      | 194.1           | 1544.53                |
| 18      | 191.8           | 1563.05                | 42      | 194.2           | 1543.73                |
| 19      | 191.9           | 1562.23                | 43      | 194.3           | 1542.94                |
| 20      | 192.0           | 1561.42                | 44      | 194.4           | 1542.14                |
| 21      | 192.1           | 1560.61                | 45      | 194.5           | 1541.35                |
| 22      | 192.2           | 1559.79                | 46      | 194.6           | 1540.56                |
| 23      | 192.3           | 1558.98                | 47      | 194.7           | 1539.77                |

| Output Differential Impedance |         | ZOUT   | 85   | 100  | 115     | Ω     |       |
| Rx_LOS                        | LOS     |        | 2.4  |      | Vcc+0.3 | V     |       |
|                               | Normal  |        | 0    |      | 0.4     | V     |       |

## Notes:

- 1. AC coupled input. CML logic. Internally AC coupled.
- 2. RIN>100kΩ @ DC.
- 3. AC coupled output. CML logic. Internally AC coupled.

**Optical Characteristics** 

| Parameter                               | Symbol | Min. | Тур. | Max. | Unit | Notes |
|---|--------|------|------|------|------|-------|
| Transmitter                             |        |      |      |      |      |       |
| Center Wavelength Spacing               |        |      | 100  |      | GHz  |       |
|   |        |      | 0.8  |      | nm   |       |
| Side-Mode Suppression Ratio             | SMSR   | 30   |      |      | dB   |       |
| Average Output Power @25.78Gbps         | POUT   | -1   |      | 4    | dBm  | 1     |
| Extinction Ratio                        | ER     | 6    |      |      | dB   |       |
| Receiver                                |        |      |      |      |      |       |
| Receiver Sensitivity @25.78Gbps         | Pmin   |      |      | -14  | dBm  | 2     |
| Receiver Overload                       | Pmax   | 2    |      |      | dBm  | 3     |
| LOS De-Assert                           | LOSD   |      |      | -17  | dBm  |       |
| LOS Assert                              | LOSA   | -30  |      |      | dBm  |       |
| LOS Hysteresis                          |        | 0.5  |      |      | dB   |       |
| Optical Signal to Noise Ratio Tolerance | OSNR   | 33   |      |      | dB   |       |

## Notes:

- 1. Output is coupled into a  $9/125\mu m$  single-mode fiber.
- 2. Minimum average optical power measured at the BER less than  $5E^{-5}$ . The measure pattern is PRBS  $2^{31}$ -1.
- 3. It's suggested to use a >3dB attenuator between the transmitter and receiver if testing Tx to Rx directly.

#### **Pin Descriptions**

| Pin | Symbol     | Name/Description  | Plug Seq. | Notes |
|-----|------------|---|-----------|-------|
| 1   | VeeT       | Transmitter Ground.                                       | 1         | 5     |
| 2   | Tx_Fault   | Transmitter Fault Indication.                             | 3         | 1     |
| 3   | Tx_Disable | Transmitter Disable. Module disables on "high" or "open." | 3         | 2     |
| 4   | SDA        | Module Definition 2. Data Line for Serial ID.             | 3         | 3     |
| 5   | SCL        | Module Definition 1. Clock Line for Serial ID.            | 3         | 3     |
| 6   | MOD_ABS    | Module Definition 0.                                      | 3         | 3     |
| 7   | RS0        | Rx Rate Select (LVTTL).                                   | 3         | 9     |
| 8   | Rx_LOS     | Loss of Signal.   | 3         | 4     |
| 9   | RS1        | Tx Rate Select (LVTTL).                                   | 1         | 10    |
| 10  | VeeR       | Receiver Ground.  | 1         | 5     |
| 11  | VeeR       | Receiver Ground.  | 1         | 5     |
| 12  | RD-        | Inverse Received Data Out.                                | 3         | 6     |
| 13  | RD+        | Received Data Out.  | 3         | 7     |
| 14  | VeeR       | Receiver Ground.  | 1         | 5     |
| 15  | VccR       | 3.3±5% Receiver Power.                                    | 2         | 7     |
| 16  | VccT       | 3.3±5% Transmitter Power.                                 | 2         | 7     |
| 17  | VeeT       | Transmitter Ground.                                       | 1         | 5     |
| 18  | TD+        | Transmitter Data In.                                      | 3         | 8     |
| 19  | TD-        | Inverse Transmitter Data In.                              | 3         | 8     |
| 20  | VeeT       | Transmitter Ground.                                       | 1         | 5     |

#### Notes:

- 1. Tx\_Fault is an open collector/drain output that should be pulled up with a  $4.7k\Omega$  to  $10k\Omega$  resistor on the host board. Pull-up voltage between 2.4V and VccT/R+0.3V. When "high," output indicates a laser fault of some kind. "Low" indicates normal operation. In the "low" state, the output will be pulled to <0.4V.
- 2. Tx\_Disable is an input that is used to shut down the transmitter optical output. It is pulled up within the module with a  $4.7k\Omega$  to  $10k\Omega$  resistor. Its states are:

Low (-0.3V - 0.8V): Transmitter On.

Between (>0.8V and <2.0V): Undefined.

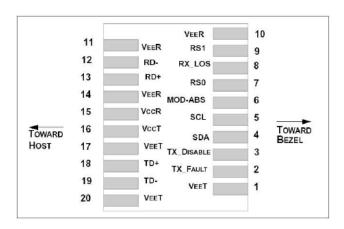

High (2.0V – VccT/R+0.3V): Transmitter Disabled.

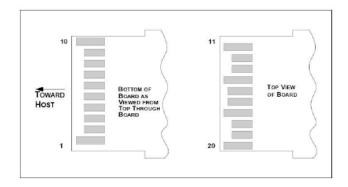

Open: Transmitter Disabled.

- 3. Module Absent. Connected to the VeeT or VeeR in the module.
- 4. Rx\_LOS (Loss of Signal) is an open collector/drain output that should be pulled up with a  $4.7k\Omega$  to  $10k\Omega$  resistor. Pull-up voltage between 2.4V and VccT/R+0.3V. When "high," this output indicated the received optical power is below the worst-case receiver sensitivity (as defined by the standard in use). "Low" indicates normal operation. In the "low" state, the output will be pulled to <0.4V.

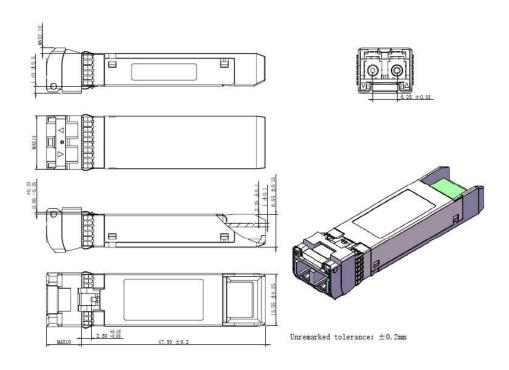

- 5. VeeR and VeeT may be internally connected within the SFP28 module.
- 6. RD-/+. These are the differential receiver outputs. They are AC-coupled,  $100\Omega$  differential lines which should be terminated with  $100\Omega$  (differential) at the user SERDES. The AC coupling is done inside the module and is thus not required on the host board. The voltage swing on these lines will be between 225mV and 525mV single-ended when properly terminated.
- 7. VccR and VccT are the receiver and transmitter power supplies. They are defined as  $3.3V\pm5\%$  at the SFP + connector pin. Maximum supply current is 606mA. Indicators with DC resistance of less than  $1\Omega$  should be used in order to maintain the required voltage at the SFP28 input pin with 3.3V supply voltage. When the recommended supply filtering network is used, hot-plugging of the SFP28 transceiver module will result in an in-rush current of no more than 30mA greater than the steady state value. VccR and VccT may be internally connected within the SFP28 transceiver module.
- 8. TD-/+. These are the differential transmitter inputs. They are AC-coupled, differential lines with  $100\Omega$  differential terminations inside the module. The AC coupling is done inside the module and is thus not required on the host board. The inputs will accept swings of 20mV to 50mV (single-ended), though it is recommended that values between 90mV and 900mV (single-ended) be used for best EMI performance.
- 9. This pin has an internal 47k pull-down to ground. RS0=1 sets Rx CDR enable, while RS0=0 sets Rx CDR bypass.
- 10. This pin has an internal 47k pull-down to ground. RS1=1 sets Tx CDR enable, while RS1=0 sets Tx CDR bypass.

## **OptioConnect**

## Innovation for the Future of High-Speed Networking

#### Who We Are

OptioConnect is reshaping the landscape of communication and high-speed networking through intelligent technology. With a core focus on cutting edge technology, we deliver smarter fiber optic solutions for enterprise networks, data centers, and next-gen telecom infrastructures.

#### What We Do

At OptioConnect, we fuse advanced engineering with intelligent automation to drive the future of networking. Our Al-integrated solutions are designed to optimize performance and streamline operations with:

- Superior Performance
- Network and traffic optimization
- Intelligent energy management
- Seamless OEM compatibility
- Scalable cost-efficiency

#### **Smarter Networks by Design**

Innovation isn't just a goal—it's our process. We embed AI and machine learning across our R&D and product lines, enabling adaptive performance, automated tuning, and faster deployment cycles. The result? Networks that don't just work—they learn, evolve, and outperform.

#### **Our Team**

Our engineers, data scientists, and network architects bring decades of experience and a future-focused mindset. We provide hands-on support with intelligent insights that turn complex challenges into simple solutions.

#### **Our Mission**

To deliver AI-enhanced connectivity that reduces cost, increases speed, and maximizes efficiency—empowering our partners to operate at the forefront of a rapidly evolving digital world.

#### **Let's Connect**

Discover how OptioConnect's intelligent infrastructure solutions can power your network's next leap forward. <a href="https://www.optioconnect.com">www.optioconnect.com</a> | info@optioconnect.com
