

### SFP-10/25GB-BXD32-10-AO

MSA and TAA 10/25GBase-BX SFP28 Transceiver (SMF, 1330nmTx/1270nmRx, 20km, LC, DOM)

#### Features

- SFF-8402 and SFF-8472 Compliance
- Simplex LC Connector
- Commercial Temperature 0 to 70 Celsius
- Single-mode Fiber
- Hot Pluggable
- Excellent ESD Protection
- Metal with Lower EMI
- RoHS Compliant and Lead Free

#### Applications

- 25GBase Ethernet
- Access and Enterprise

#### Product Description

This MSA compliant SFP28 transceiver provides 10/25GBase-BX throughput up to 20km over single-mode fiber (SMF) using a wavelength of 1330nmTx/1270nmRx via an LC connector. This bidirectional unit must be used with another transceiver or network appliance of complementing wavelengths. It can operate at temperatures between 0 and 70C. It has been programmed, uniquely serialized, and tested for data-traffic and application to ensure that it will initialize and perform identically. All of our transceivers comply with Multi-Source Agreement (MSA) standards to provide seamless network integration. Additional product features include Digital Optical Monitoring (DOM) support which allows access to real-time operating parameters. We stand behind the quality of our products and proudly offer a limited lifetime warranty.

AddOn's transceivers are RoHS compliant and lead-free.

TAA refers to the Trade Agreements Act (19 U.S.C. & 2501-2581), which is intended to foster fair and open international trade. TAA requires that the U.S. Government may acquire only "U.S.-made or designated country end products.")

### Regulatory Compliance

- Electromagnetic Interference (EMI) compatible with standards: FCC Part 15 Class B, EN 55022:2010, Class B
- Electromagnetic susceptibility (EMS) compatible with standards: EN 55024:2010
- Laser Eye Safety compatible with Class I laser product FDA 21CFR 1040.10 and 1040.11 EN60950, EN (IEC) 60825-1,2
- RoHS compliant with EU RoHS 2.0 directive 2015/863/EU

### Absolute Maximum Ratings

| Parameter                           | Symbol           | Min. | Max. | Unit |
|-------------------------------------|------------------|------|------|------|
| Maximum Supply Voltage              | V <sub>CC</sub>  | -0.5 | 3.6  | V    |
| Storage Temperature                 | T <sub>S</sub>   | -40  | 85   | °C   |
| Operating Case Temperature          | T <sub>C</sub>   | 0    | 70   | °C   |
| Operating Humidity (non-condensing) | RH               | 5    | 95   | %    |
| Receiver Power                      | R <sub>MAX</sub> |      | -12  | dBm  |
| Maximum Bitrate                     | B <sub>max</sub> |      | 28   | Gbps |

### Electrical Characteristics (TOP=25°C, V<sub>CC</sub>=3.3Volts)

| Parameter                      | Symbol              | Min.  | Typ. | Max.                 | Unit | Notes |
|--------------------------------|---------------------|-------|------|----------------------|------|-------|
| Power Supply Voltage           | V <sub>CC</sub>     | 3.135 | 3.30 | 3.465                | V    |       |
| Power Supply Current @ 3.3V    | I <sub>CC</sub>     |       |      | 350                  | mA   |       |
| Power Consumption              | P <sub>DISS</sub>   |       |      | 1.5                  | W    |       |
| Transmitter                    |                     |       |      |                      |      |       |
| Differential data input swing  | V <sub>in,pp</sub>  | 180   |      | 700                  | mV   |       |
| Transmitter Enable Voltage     | V <sub>EN</sub>     | -0.3  |      | 0.8                  | V    |       |
| Transmitter Disable Voltage    | V <sub>D</sub>      | 2.0   |      | V <sub>CC</sub> +0.3 | V    |       |
| Receiver                       |                     |       |      |                      |      |       |

| LOS De-Asserted                        | T_loss_off                |      |      | -13  | dBm  |                   |
| LOS Hysteresis                         | T_loss_Hs                 | 0.5  |      | 5.0  | dB   |                   |

### Notes:

1. At least 1000 waveforms acquired, with minimum 5% margin against 802.3 mask
2. Test at 25.78125Gb/s, PRBS 2<sup>31</sup>-1, BER of 5E-5, NRZ and including back to back

## Pin Descriptions

| Pin | Symbol     | Name/Descriptions                                                                | Ref.                               |
|-----|------------|----------------------------------------------------------------------------------|------------------------------------|
| 1   | VeeT       | Transmitter Ground                                                               |                                    |
| 2   | TX Fault   | Transmitter Fault Indication                                                     | 1                                  |
| 3   | TX Disable | Transmitter Disable                                                              | 2, Module disables on high or open |
| 4   | SDA        | 2-wire Serial Interface Data Line (Same as MOD-DEF2 in INF-8074i)                |                                    |
| 5   | SCL        | 2 Wire Serial Interface Data Line (Same as MOD-DEF1 as defined in the INF-8074i) |                                    |
| 6   | MOD-ABS    | Module Absent, Connected to VeeT or VeeR in the module.                          | 3                                  |
| 7   | RS0        | SFP+ RX Rate Select, optional                                                    | Rate Select 0, Not used. 9         |
| 8   | LOS        | Loss of Signal                                                                   | 4                                  |
| 9   | RS1        | SFP+ TX Rate Select, optional                                                    | Rate Select 1, Not used. 9         |
| 10  | VeeR       | Receiver Ground                                                                  | 5                                  |
| 11  | VeeR       | Receiver Ground                                                                  | 5                                  |
| 12  | RD-        | Inv. Received Data Out                                                           | 6                                  |
| 13  | RD+        | Received Data Out                                                                | 6                                  |
| 14  | VeeR       | Receiver Ground                                                                  | 5                                  |
| 15  | VccR       | Receiver Power                                                                   | 7, 3.3V 5%                         |
| 16  | VccT       | Transmitter Power                                                                | 7, 3.3V 5%                         |
| 17  | VeeT       | Transmitter Ground                                                               | 5                                  |
| 18  | TD+        | Transmit Data In                                                                 | 8                                  |
| 19  | TD-        | Inv. Transmit Data In                                                            | 8                                  |
| 20  | VeeT       | Transmitter Ground                                                               | 5                                  |

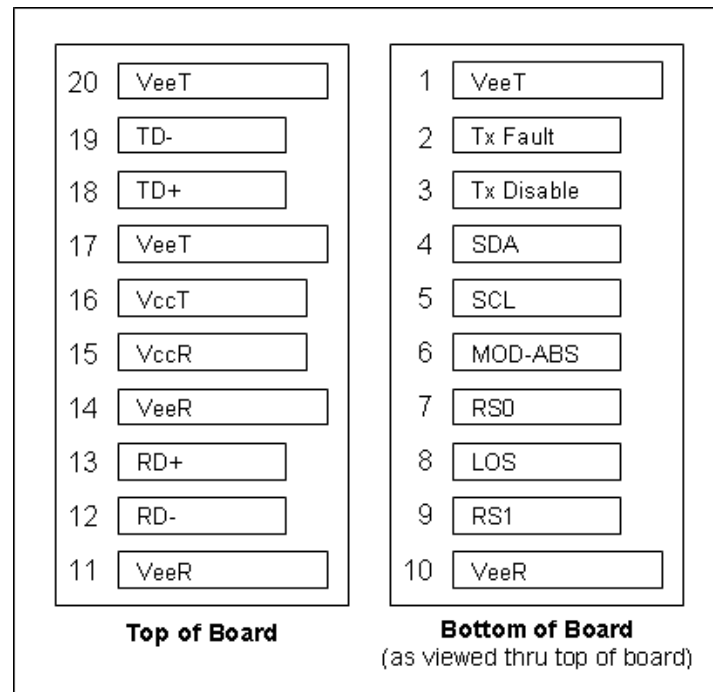

## Notes:

Plug Seq.: Pin engagement sequence during hot plugging.

1. TX Fault is an open collector/drain output, which should be pulled up with a 4.7K–10KΩ resistor on the host board. Pull up voltage between 2.0V and VccT +0.3V. When high, output indicates a laser fault of some kind. Low indicates normal operation. In the low state, the output will be pulled to < 0.4V.
2. TX disable is an input that is used to shut down the transmitter optical output. It is pulled up within the module with a 4.7–10 KΩ resistor. Its states are:  
Low (-0.3–0.8V): Transmitter on (>0.8, < 2.0V): Undefined  
High (2.0–VccT+0.3V): Transmitter Disabled Open: Transmitter Disabled
3. Mod-ABS shall be pulled up with a 4.7K–10KΩ resistor on the host board. The pull -up voltage shall VccT or VccR.
4. LOS (Loss of Signal) is an open collector/ drain output, which should be pulled up with a 4.7K–10KΩ

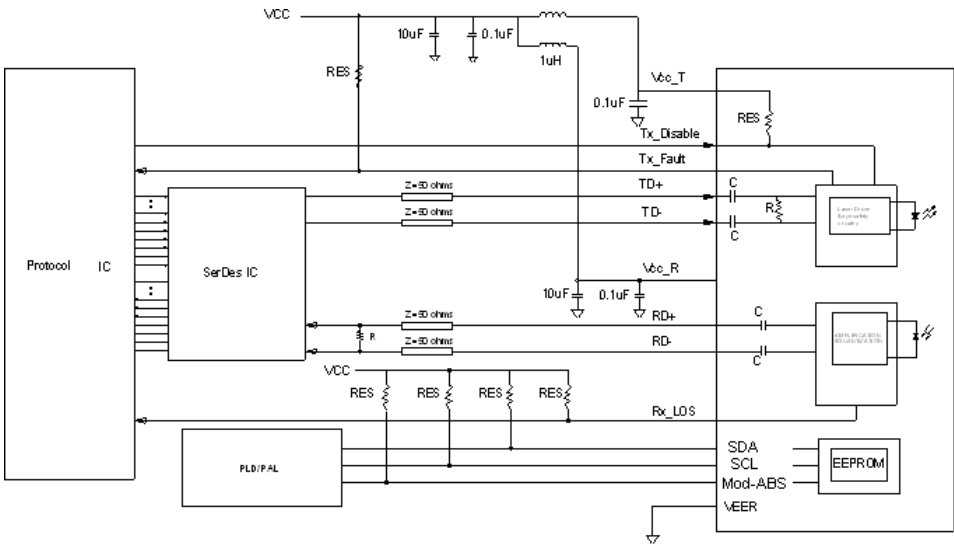

resistor. Pull up voltage between 2.0V and VccR+0.3V. When high, this output indicates the received optical power is below the worst-case receiver sensitivity (as defined by the standard in use). Low indicates normal operation. In the low state, the output will be pulled to < 0.4V.

5. VeeR and VeeT may be internally connected within the SFP module.
6. RD-/+: These are the differential receiver outputs. They are AC coupled 100Ω differential lines which should be terminated with 100Ω (differential) at the user SERDES. The AC coupling is done inside the module and is thus not required on the host board.
7. VccR and VccT are the receiver and transmitter power supplies. They are defined as 3.3V 5% at the SFP connector pin. Maximum supply current is 300mA. Recommended host board power supply filtering is shown below. Inductors with DC resistance of less than 1Ω should be used in order to maintain the required voltage at the SFP input pin with 3.3V supply voltage.  
When the recommended supply filtering network is used, hot plugging of the SFP transceiver module will result in an inrush current of no more than 30 mA greater than the steady state value. VccR and VccT may be internally connected within the SFP transceiver module.
8. TD-/+: These are the differential transmitter inputs. They are AC-coupled, differential lines with 100Ω differential termination inside the module. The AC coupling is done inside the module and is thus not required on the host board.
9. Internally pulled down per SFF-8431 Rev 4.1.

Pin-out of connector Block on Host board

### Recommended Circuit Schematic

NOTE: 4.7K ohms<RES<10K ohms

### Digital Diagnostic Functions

Digital diagnostics monitoring function is available on this module. A 2-wire serial interface provides user to contact with module. It is compliant to SFF-8472 Rev10.2 with internal calibration mode.

| Parameter                             | Symbol    | Min. | Max. | Unit | Notes |
|---------------------------------------|-----------|------|------|------|-------|
| Temperature monitor absolute error    | DMI_Temp  | -3   | +3   |      |       |
| Supply voltage monitor absolute error | DMI_VCC   | -3%  | +3%  | V    |       |
| TX power monitor absolute error       | DMI_RX    | -3   | +3   | dB   |       |
| RX power monitor absolute error       | DMI_RX    | -3   | +3   | dB   |       |
| Bias current monitor                  | DMI_Ibias | -10% | +10% | mA   |       |

**Mechanical Specifications**

Small Form Factor Pluggable (SFP) transceivers are compatible with the dimensions defined by the SFP Multi-Sourcing Agreement (MSA).

## About AddOn Networks

In 1999, AddOn Networks entered the market with a single product. Our founders fulfilled a severe shortage for compatible, cost-effective optical transceivers that compete at the same performance levels as leading OEM manufacturers. Adhering to the idea of redefining service and product quality not previously had in the fiber optic networking industry, AddOn invested resources in solution design, production, fulfillment, and global support.

Combining one of the most extensive and stringent testing processes in the industry, an exceptional free tech support center, and a consistent roll-out of innovative technologies, AddOn has continually set industry standards of quality and reliability throughout its history.

Reliability is the cornerstone of any optical fiber network and is ingrained in AddOn's DNA. It has played a key role in nurturing the long-term relationships developed over the years with customers. AddOn remains committed to exceeding industry standards with certifications from ranging from NEBS Level 3 to ISO 9001:2005 with every new development while maintaining the signature reliability of its products.
