Product Description

This MSA compliant SFP+ transceiver provides 10GBase-CWDM HD1 throughput up to 20km over single-mode fiber (SMF) at a bidirectional wavelength of 1310nm HTx/LRx via an LC connector. The listed reach has been determined using a link budget calculation and tested in a standard environment. Actual link distances achieved will be dependent upon the deployed environment. All of our transceivers are built to comply with Multi-Source Agreement (MSA) standards and are uniquely serialized and tested for data-traffic and application to ensure seamless network integration. Additional product features include Digital Optical Monitoring (DOM) support which allows access to real-time operating parameters. This transceiver is Trade Agreements Act (TAA) compliant. We stand behind the quality of our products and proudly offer a limited lifetime warranty.

AddOn's transceivers are RoHS compliant and lead-free.

TAA refers to the Trade Agreements Act (19 U.S.C. & 2501-2581), which is intended to foster fair and open international trade. TAA requires that the U.S. Government may acquire only "U.S.-made or designated country end products.")

8. These voltages are measured on the other side of the connector to the device under test.
9. Ci is the capacitance looking into the module SCL and SDA contacts.
10. Cb is the total bus capacitance on the SCL or SDA bus.

Notes:

1. The module signal grounds are isolated from the module case.

3. This input is internally biased “high” with a 4.7kΩ to 10kΩ pull-up resistor to the VccT.
4. 2-wire serial interface clock and data lines require an external pull-up resistor dependent on the capacitance load.
5. The signals MOD_DEF0, 1, & 2 designate the 2-wire serial interface pins. They must be pulled up with a 4.7kΩ to 10kΩ resistor on the host board. MOD_DEF0 is grounded by the module to indicate that the module is present.
