

Floral Compost Activator

Welcome to this intriguing approach to composting, I hope you find the links below useful, and either forge your own path through the work, or hop on board with the Blue Borage research group to share your journey with others.

I began drying the flowers in earnest in mid January 2025, and am anticipating that 2025 might be a year to experiment with a wide range of flowers and herbs.

I've spent the last 15 years as a biodynamic gardener, making more and more of the preparations each year, but am increasingly frustrated at how hard it is to find the animal parts, and how much skepticism there is in the wider community to the methods taught by Rudolf Steiner.

So... as I get set to move house, I'm hoping this 'quick return common sense composting' method taught by Maye Bruce will help me stay connected with the essence of each of the flowers we use in biodynamics, while perhaps offering my customers a methodology for refining composting that can be used by any home gardener.

So, here are the links:

Maye Bruce's book on Scribd:

<https://www.scribd.com/document/103100402/Bruce-Maye-Common-Sense-Compost-Making>

This website has immediate access without needing to create an account:

https://journeytoforever.org/farm_library/QR/QRTtoC.html

And then this website has the book available as a download:

http://www.zetataalk3.com/docs/Composting/Common_Sense_Compost_Making_1946.pdf

As I learn more about this method, I'll update this free download with more relevant information. Signing up once means you'll get access to the upgrades as they become available.

Thanks for supporting this work - the number of downloads will help validate research funding if it feels like that would make sense down the track.

Best wishes,
Katrina
