

FUNDAMENTALS WETLAB

OVERVIEW & PURPOSE

Fundamental concepts cannot be taught and practised in a few hours. Our 2-day lab is designed to provide you with all of the necessary fundamental information (4 hours of lecture material) and then utilize the remaining time (~ 10 hours) hands-on. You will leave the lab immediately able to put learning to work - just read through the sample testimonials on our website vetpearlywhites.com

STANDARD OF CARE

1. You will leave the wetlab understanding true standard of care - you will no longer feel lost when it comes to extraction technique and treatment planning.
2. Current peer-reviewed material is presented with references.

OBJECTIVES

1. Recognize and select appropriate instrumentation for flap development & tooth extraction.
2. Improve your ability to recognize common pathology and what fits your skillset.
3. Know most common complications and how to address them.

MATERIALS NEEDED

1. Magnification Loupes with lighting - if possible
2. Scrubs and appropriate footwear (no open-toed shoes/sandals)

ACTIVITY

We will perform the 1st maxillary canine extraction together as a group with the instructors verifying each step before proceeding to the next one. Then you can proceed on your own.
