■ We're Here for You

Chi Decisions brings engineering rigour to enterprise risk management: strengthening governance by making enterprise risks and controls visible using ISO 31000 and COSO-aligned frameworks and enabling good decision-making by embedding uncertainty analysis into how organisations plan and choose. Led personally by Arthur Chivinge, PMI-RMP and RPEQ.

- Enterprise risk framework development aligned to ISO 31000 and COSO, strengthening governance and enabling good decision-making
- Quantitative enterprise risk register development and scenario analysis for tail risks
- Embedding uncertainty analysis into strategic and tactical decision-making
- Facilitation of executive and board-level risk workshops
- Executive and board-level risk reporting

■ How Others Have Benefited

- Led an Organisational Material Risk Profile Review for BHP OS, assessing risks by materiality of exposure and chance of loss to establish a clear basis for prioritising material risks.
- Delivered monthly risk insights to BHP OS's Risk Steering Committee and half-yearly risk reporting to the Board, synthesising material risk health to support informed senior leadership oversight.
- Conducted Independent Peer Reviews, Level 2 Assurance Reviews and internal audits of critical controls, providing independent challenge and assurance over control effectiveness.
- Developed Business Continuity Plans for material business risk events, most recently for BHP's Prominent Hill Mine, strengthening preparedness for significant operational disruption.

■ Don't Just Take Our Word for It

“Arthur brought a rare combination of strategic insight and practical execution to risk management. His ability to tailor risk tools like Stature and ARM to suit the specific context of each project was exceptional, and his monthly reporting provided senior leadership with clear, actionable insights.”

[Leanne Gale, Lead Risk, BHP Coal Asset Projects]

■ The Credentials Behind It

- Chartered Engineer (Risk Engineering), EA
- PMI-Risk Management Professional (PMI-RMP), Project Management Institute
- RPEQ (Chemical Engineering), BPEQ
- Certificate in Governance and Risk Management, Governance Institute of Australia
- BEng Chemical Engineering (Hons), Curtin
- ANU-ActuarialX: Introduction to Actuarial Science, Australian National University
- Authored “The Dual Nature of ERM: Defence and Offence,” challenging conventional ERM thinking.

Got a risk framework to build or strengthen or a decision that needs stress testing? **Let's talk.**
