1 page cheat sheet

6 step framework to think about answering any scenario based question:

1. What is the problem?
2. What is the result I need to achieve?
3. Who are the parties involved?
4. What is best for the client?
5. Do I have all the information I need?
6. How can I deliver maximum value

We can then translate this to a rough structure of:

- What's the problem and who is involved?
- What do I need to do?
- How can I deliver maximum value?
