

# Past Weekly Reports

---

This section archives every week's picks email for reference. The archive grows by one report each Monday after the email ships.

## First Edition

**Week 2026-W22 — Monday, May 26, 2026** The first Premium picks email of The Signal — Live ships here.

---

## How to read prior reports

Each archived report contains the same four sections as the original email: 1. This Week's Picks (10 ranked tickers) 2. This Week's Read (editorial commentary) 3. Governance (calibration result + 4 leakage gates) 4. Last Week's Realized (actual return vs SPY)

Use the archive for: - **Re-reading a specific week's commentary** when something in the market plays out as the model expected - **Tracking realized vs. predicted over time** — each week's realized review references the prior week's UP list - **Auditing the methodology** by spot-checking historical calibration gate results

## Performance disclosure

The realized return numbers archived here are the model's actual recorded outcomes — not selectively curated highlights. Weeks where the model lost money are included alongside the winning weeks.

Past performance is not indicative of future results. This is research, not advice.
