

Cloudform Beam Unlit

Overview

CLOUDFORM COLLECTION

Specifications

SHADES	Cloudform Beams are acoustical fixtures made from fiberglass and finished on all outer edges and surfaces. Cloudform Beams are made with 43–53% recycled content fiberglass. Cloudform Beams are available with multiple standard color options and wood-look visuals for the finished Beams.	FIRE PERFORMANCE	Cloudform Beam fiberglass has a Class A fire rating. The Beams, as with other architectural features located in the ceiling plane, may obstruct or skew the existing or planned fire sprinkler water distribution pattern, or possibly delay the activation of the fire sprinkler or fire detection system. Designers and installers are advised to consult a fire protection engineer, NFPA 13, and their local codes for guidance on the proper installation techniques where fire detection or suppression systems are present.
DESIGN CONSIDERATION	Cloudform Beams are available in rectangular shape, note that Beams require a minimum of 2" gap between ends of Beams for best visual due to potential bowing up to 1/8".	CLEANING CARE	Dust and loose dirt may be easily removed by brushing or with a vacuum cleaner. Vacuum cleaner brush attachments such as those designed for cleaning upholstery or walls do the best job. Be certain to clean in one direction only. This will prevent rubbing dust into the surface of the Beam. Use a melanine eraser sponge to wipe off any dirt or greasy fingerprints. For minor surface and edge scuffing, or scratches on colored panels, use matching Sherwin-Williams® paint that can be purchased from your local Sherwin-Williams® store.
STORAGE AND HANDLING	Cloudform Beams must be stored in a dry interior location and must remain in their original cartons prior to installation to avoid damage. The cartons must be stored in a flat, horizontal position. Proper care should be taken when handling Beams to avoid damage and soiling. White cotton or latex gloves are recommended for handling. It is recommended that two installers handle 94" Beams.		
TEMPERATURE	Cloudform Beams can be installed where the temperature is between 40°F (4°C) and 120°F (49°C). Beams cannot be used in exterior applications, where standing water is present, or where moisture will come in direct contact with the Beams.
