OptConnect Launches neo2 Router

(SILICON SLOPES, Utah) December 7, 2020 – OptConnect, an industry leader in managed wireless solutions, today announced that they have officially launched a brand-new dual-carrier LTE Category 4 router, neo2. neo2 is the next generation of the company's most popular router, neo, that is perfectly suited for kiosks, micro markets, digital signs and other applications that require high speed connectivity and the peace of mind of redundant carrier connections.

"We've taken everything customers love about neo and made it twice as good," said Steve Garrett, Chief Product Officer at OptConnect. "Rather than having to choose between a single carrier, neo2 has dual carrier functionality. When you need the very best connectivity for your equipment, neo2 delivers twice the coverage with 2 carriers built right in."

Every neo2 router comes bundled with OptConnect's fully-managed wireless services as well as a lifetime license to Summit— the management system designed for your phone, tablet, or computer. neo2 also includes Glimpse™ an on-board API that responds to requests from equipment's software and tells that equipment how neo2's cellular connection is performing.

In the same form factor as its predecessor, neo2 also includes a second ethernet port so operators and deployers can connect two devices to a single router providing greater flexibility and twice the connectivity power.

neo2 is a truly compact, full-featured high-speed cellular router that fits almost anywhere so customers can connect their equipment to their cloud services. The dual redundant cellular connections give peace of mind while full integration with OptConnect's complete managed wireless service makes for a headache free experience.

With twice the carrier coverage, twice the connectivity power, and nearly twice the speed, neo2 is the next evolution in OptConnect's fully managed cellular connectivity for the Internet of Things.
