# STEP BY STEP HOW TO USE PIP GRABBER
### Game Changer

**1.** Purchase the SMA product through the BD Store, or in the product selection of the ByDzyne registry.
(Once the product is purchased, it will be activated 24-48 hours later).

**2.** Enter the Back Office/ Products/ Smart Market Academy, activate the product by selecting the blue button that says activate.

**3.** We will access the academy in the back office/ Products/ Smart Market Academy, and inside we will be able to make use of all the courses, videos and tools that the academy has available.
(It is necessary to log in once every 15 days or once a month for MTI to continue recognizing us as active students.)

**4.** We will need to open a DEMO or Live account with a broker (other than suffix), which will allow us to manage funds in the financial market and link our SMA account with Metatrader4. In the back office/ Products/ Smart Market Academy, we can find a Broker option called Place a Trade, which has a partnership with MTI and will offer us personalized support.
(It does not work for the USA, Venezuela, or Iran).

**5.** We will download Metatrader 4, this can be downloaded from most broker's portals once we create the account, or it can be done through the official website, and we can enter the broker credentials in mt4.

**6.** It is recommended to use a VPS (VIRTUAL PRIVATE SERVER) to optimize the results of using the tool, Pip Grabber needs a stable internet connection for the duration of each trade placed in the tool, a VPS will facilitate.

**7.** We will add the broker to Smarttrader, logging in from the back office or through smarttrader.com/chats, there we will find in the middle left side a money symbol enclosed in a circle, right-click and select Manage Accounts, select the blue ADD button, there, we will enter all the credentials of the broker we have created and press the blue Connect button.

**8.** We will enter the VPS from our computer by searching in the search bar REMOTE DESKTOP, the VPS will send us some credentials to the email with which we can access the VPS, and within it, we can open the browser and continue the process.

**9.** We will download the SMA OFFICIAL app on a single mobile device, we will enter with our back office credentials, and inside we will be able to find:

- ◯ A link to UnitedByDzyne where we can find all the videos, glossary, manual and important lessons to learn how to use the tool.
- ◯ The signals option where we will receive the entry, close and pending levels management signals.
- ◯ A link to MyFxBook where we can track both the official Pipgrabber account and our own accounts.
- ◯ The academy option, which will send us to the same academy link we have in the back office.
- ◯ The option to enter Smarttrader from where we can review the status of operations.
- ◯ The link to the live SMA sessions.

(It is recommended to grant all permissions to the app so that it notifies correctly about the signals, only one device per account should be used, it is recommended to periodically clean the storage memory of the app for better performance).

**10.** In UnitedByDzyne.com/ products/ digital trend/ Smart Market Academy, we can find, learning material, video tutorials, a glossary of concepts, a manual of the use of the tool, risk management, and videos of previous sessions among which we can find sessions with the creator of the tool and the CEO of MTI.

**11.** Entering smarttrader.com / Charts/ we will find on the upper right-hand side a network echo button by clicking on this button we will be able to access all the live sessions, and by following the calendar available in Unted ByDzyne we will be able to see which are all the sessions we have to get to know the tool and to attend sessions with professional traders who do different types of market analysis.

**12.** To add a matrix, you need to follow these steps:

- ◯ Right-click on the chart of the symbol or pair on which you want to trade, after this a menu of options will be displayed, please select the option "Add matrix" or "Add a matrix".
- ◯ Selecting this option will open a box in which we must configure certain aspects in order to place the trade in the market through the matrix.
- ◯ Once this box is opened, we will have to select the option "Place Market order" so that it is selected in green color so that we can place the operation in the market.
- ◯ In the option "Execution Mode" we must select "Real pending".
- ◯ In the "Number of levels," we must select 10 (These are the pending levels that will be opened through the matrix).
- ◯ In the section "Lots per level," we must type the lottage with which we will operate with the matrix.
  (It is necessary to review the risk management document to know how much lottage to place according to the available capital in our account).
- ◯ In the option "Distance between levels" we must select 25, these are the pips at which the pending levels will be opened.
- ◯ In the section "Pending orders direction" we must select the direction in which we want our pending levels to be opened, this depends on the type of operation we are doing (buy or sell).
- ◯ In case of a purchase, we must select the option "Below the market".
- ◯ In case of a sale, we must select the option "Above the market".
- ◯ In the option "Place order" we must select "Immediately".
- ◯ In the section "order side" we will select the type of operation with which the matrix will work: Buy for purchase and Sell for sale.
- ◯ In "Broker account" we will select the account with which we will operate, either Demo or real.
- ◯ In the section "Close all orders on net pips" we must check the box so that it is selected, we must also select the number of pips of profit at which we want our order to be closed, in this case we will select 20.
- ◯ Once this information is configured, click on the OK button and our matrix will start trading.
