Press tune up to enter privacy mode while in a phone call.

Example:

Adjusting the output gain

- 1) Press Preset 4 to access the output gain adjustment.

Radio text will clear and the channel number will be the current gain level. The level can be adjusted from 1 - 9 with 1 being the lowest and 9 being the highest.

- 2) Within 7 seconds press preset 5 to lower the gain and preset 6 to raise the gain.

The channel number on the radios display will change accordingly.

- 3) 7 seconds after the last button press the level will be stored and the track text will reappear on the radios display.
