<sup>a</sup> SWW= Soft White Winter Wheat, WC=Winter Club.

<sup>b</sup> MD= Most Desirable, D= Desirable, A= Acceptable, LD= Least Desirable

<sup>c</sup> R = resistant, MR = moderately resistant, MS = moderately susceptible, and S =susceptible.

<sup>d</sup> The high-temperature adult-plant (HTAP) resistance data were based on greenhouse tests. Unknown= Wheat the entry has HTAP resistance or not couldn't be determined as it was resistant to all tested races in the seedling stage. TBT= to be tested. Entries with the combination of Yr5 and/or Yr15 may not have HTAP resistance but their resistance should be highly effective as no races virulent to either of the genes are found in the US.

<sup>e</sup> Rankings from 1-9, 1= highest survival, 9=lowest survival.

<sup>f</sup> Rating reflects the degree of resistance and ranges from 1 to 9, where 1= highly resistant and 9= highly susceptible.
