

Recommendation for WA 38 Harvest

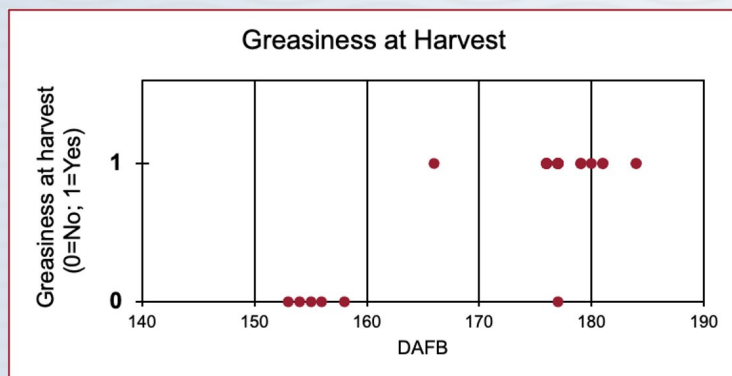

In general:

- 165-175 days after full bloom (DAFB)
- Soluble solids >11 ° Brix
- Flesh firmness: 16-23 lb
- Starch Index: 1.5-4.5 (before 4 months of storage)
1.5-3.0 (more than 4 months of storage)

At harvest:

- Mechanical damage
 - Stem punctures: Stem clipping is recommended.
- Avoid over-maturity! Optimal harvest time will reduce splits and skin greasiness.

- Should decrease as tree ages.
- It is lot-dependent and variable between growing areas.

Key: Good 'wax job' during packaging.
